

Main Functionalities

1. User Authentication

- Secure login system to ensure authorized access.

2. Employee Management

- Add, edit, and manage employee profiles, including personal and employment details.

3. Salary Computation

- Automated salary calculations incorporating basic pay, allowances, bonuses, deductions, and taxes.

4. Payroll Processing

- Generate payslips and manage payroll cycles (weekly, bi-weekly, monthly) with support for multiple pay structures.

5. Deductions & Benefits Management

- Handle statutory deductions (e.g., social security, Medicare), employee benefits (e.g., health insurance, retirement plans), and voluntary deductions.

6. Overtime & Leave Management

- Track and calculate overtime pay, manage vacation, sick leaves, and other time-off policies.

7. Technical Support

- Provide 24/7 support, especially during payroll processing periods.

8. Data Security & Encryption

- Implement strong encryption protocols to safeguard sensitive employee and financial data.

9. Role-Based Access Control (RBAC)

- Restrict system access based on user roles to enhance data security.

10. Audit & Compliance Tracking

- Maintain detailed logs of system activities for compliance and security audits.

Additional Functionalities

1. Multi-Currency Support

- Process payroll in different currencies for international employees.

2. Customizable Payslip Templates

- Allow businesses to design and customize payslips with logos and additional details.

3. Employee Self-Service Portal

- Enable employees to view their payslips, update personal details, and request leave.

4. Custom Reports & Analytics

- Generate advanced payroll reports based on custom filters and business needs.

5. User Authentication

- Secure login system to ensure authorized access.

Status Report

This is for UAT (User Acceptance Testing) purposes and not for production

- Payslip is currently in word format until final date of the system. The api used to convert to pdf we don't use it for tests but production
- Decreasing leave balance upon creating a leave is on the production server
- Functions highlighted in yellow are on Prod server.
- Logout functionality is on the prod server.
- Current logged in user is on the prod server.
